BRENNO CAVALCANTI

GAME DEVELOPER

Uberlândia, Brazil +55 (34) 9 9163-0410 brennocurtolo@gmail.com LinkedIn GitHub

TECHNICAL SKILLS

Game Development & 3D
Unity, C#, Blender, Godot, Unreal Engine

Gameplay Systems
Player controls, physics, collision handling, collectibles, enemy AI

Languages
C#, Python, SQL, TypeScript, Java, Swift, UIKit

Data & Analytics
Snowflake, BigQuery, MongoDB, DBT, Airbyte, Metabase, Firebase

Testing & Automation
WebdriverIO, Appium, CI/CD pipelines

Full-stack & Integrations
Next.js, TypeScript, Supabase, Vercel, WhatsApp Business API, OpenAI, App Store Connect, Slack

EDUCATION

B.Sc. in Computer Science
Federal University of Uberlândia (UFU), Brazil
2021–2025

LANGUAGES

Portuguese	Native
English	Fluent

HIGHLIGHTS

- 3+ years of professional software engineering experience
- Hands-on 2D and 3D game development with Unity and C#
- Gameplay programming, physics, and enemy AI
- Cross-functional experience in data, QA, and mobile development

PROFILE SUMMARY

Game Developer with hands-on experience building 2D and 3D games in Unity and C#, supported by 3+ years of professional software engineering experience. Implemented gameplay systems including player movement, physics, collisions, collectibles, animations, and enemy AI. Research experience includes exploring adaptive difficulty and accessibility for players with motor or cognitive challenges, alongside professional work in data engineering, QA automation, and mobile development.

PROFESSIONAL EXPERIENCE

Software Engineer — Data & Analytics **2024–2026**
BitBoundaire Company · Florida, USA

- Built and maintained end-to-end data pipelines using Airbyte and DBT, improving the reliability and consistency of ingested data.
- Modeled and maintained data across Snowflake, BigQuery, and MongoDB to support analytics and reporting.
- Defined and validated behavioral events and transactional data to ensure accurate, reliable datasets.
- Used Firebase Analytics to analyze user behavior and maintain A/B tests; created Metabase dashboards to support product and business decisions.

Software Engineer — Development & QA **2022–2024**
BitBoundaire Company · Florida, USA

- Developed and maintained mobile app features using Swift and UIKit.
- Built automated test suites with WebdriverIO, Appium, and TypeScript, reducing manual effort and catching regressions earlier.
- Executed functional, regression, and performance tests to ensure product quality across software versions.
- Integrated automated tests into CI/CD pipelines to support faster, more reliable deliveries.

PROJECTS

Survival Hunt — 3D Survival Game GitHub
Developed a Unity and C# survival game where players collect fish while evading hunters in snowy, icy, and mountainous terrain. Implemented movement, collisions, animations, collectibles, pursuing enemies, and custom 3D assets in Blender.

Roll a Ball — Item Collection Game GitHub
Built a Unity game featuring physics-based player movement, item collection, obstacle handling, and basic enemy AI.

Undergraduate Research — Accessible 2D Game
Contributed to funded research on an accessible Unity/C# game for players with motor or cognitive challenges. Explored adaptive difficulty using image processing and gameplay signals, such as repeated deaths, to detect when the game was too difficult and adjust the challenge to help reduce frustration.

Undergraduate Thesis — Image Classification GitHub
Implemented a Vision Transformer (ViT) for image classification using the CIFAR-100 dataset, with configurable hyperparameters and CPU/GPU execution variants.

Tavunex — Business Management Platform GitHub
Built a full-stack platform for managing appointments, services, products, staff, and customer conversations. Integrated WhatsApp Business with an OpenAI-powered assistant connected to business data. Technologies: Next.js, TypeScript, Supabase, Vercel, WhatsApp Business API, and OpenAI.
